Equation 1: Equation 2: Equation 3: Adding the terms of the first and second equations together will yield . Then, add that to the third equation so that the y and z terms are eliminated. You will get . This tells us that $x = 1$. Plug this $x = 1$ back into the systems of equations. Now, we can do the rest of the problem by using the substitution method.

Add 8 to both sides to set the equation equal to 0: To factor, find two integers that multiply to 24 and add to 10. 4 and 6 satisfy both conditions. Thus, we can rewrite the quadratic of three terms as a quadratic of four terms, using the two integers we just found to split the middle coefficient: Then factor by grouping:
