AWS Lambda - Developer Guide

AWS Lambda Documentation. With AWS Lambda, you can run code without provisioning or managing servers. You pay only for the compute time that you consume—there's no charge when your code isn't running. You can run code for virtually any type of application or backend service—all with zero administration. Just upload your code and Lambda takes care of everything required to run and scale your code with high availability.

source framework that you can use to build serverless applications on AWS. A serverless application is a combination of Lambda functions, event sources, and other resources that work together to perform tasks.

Application Model AWS Serverless

An event source is an AWS service or developer-created application that produces events that trigger an AWS Lambda function to run. Some services publish these events to Lambda by invoking the cloud function directly (for example, Amazon S3). Lambda can also poll resources in other services that do not publish events to Lambda.

AWS Lambda now supports four failure-handling features for processing Kinesis and DynamoDB streams: Bisect on Function Error, Maximum Record Age, Maximum Retry Attempts, and Destination on Failure. These new features allow you to customize responses to data processing failures and build more resilient stream processing applications.
