Volume One, The Musculoskeletal System, opens with the building blocks of your body—the cells. Your body is built from many kinds of cells and tissues, and you will learn how they work. Even the bones and muscles that give you strength and speed depend on many types of cells. This book will: Show you the ins and outs of the bones in your skeleton and how they functionGive detail as to how your marvelous muscles move youProvide a detailed glossary in the back for quick reference! Throughout the book you will learn things to do to keep your body healthy. But in a fallen, cursed world things are bound to go wrong. We will look at what happens when disease or injury affects bones and muscles. Volume Two, Cardiovascular and Respiratory Systems. From the level of the cell to the organs themselves, we will examine these systems in depth. Here you will learn: The incredible design of the human heart and how it is really "two pumps in one!"How blood moves through an incredible network of arteries and veinsWhat "blood pressure" is and the marvelous systems that help regulate itHow the respiratory system allows us to get the "bad air out " and the "good air in" Along the way, we will see what happens when things go wrong. We will also suggest things to do to keep the heart and lungs healthy. Although the world insists that our bodies are merely the result of time and chance, as you examine the human body closely, you will see that it cannot be an accident. It can only be the product of a Master Designer.

Includes bibliographical references and index

In this book, your children will begin exploring the dynamics of flight and animal classification, understanding why the design we see in these incredible creatures points us to our Creator God. Then, get ready for the exciting adventure of learning about birds. Your children will learn how to attract various bird species to your yard and identify them by looking at their special physical characteristics, diverse nests, and interesting domestic practices. They will also learn the anatomy and the glorious design that enables birds to do remarkable things. The text contains actual experiments on the preferences and habits of the birds your children see. These experiments further enrich the learning experience. After becoming amateur ornithologists, your children will explore the world of chiropterology, which is the study of bats. They will be able to intelligently share with others the value of bats in our world while exposing the misconceptions that most people have regarding these docile creatures of the night. Your children will then investigate entomology, the study of insects. They will learn to scientifically classify insects they find in their yard by a simple glance at their wings and other important characteristics. In addition to designing experiments with flies, crickets, darkling moths, and caterpillars, they will also learn how to attract and catch insects for scientific study. When your children complete this study of zoology, they will never view nature in the same way again. Their eyes will be open to the different species that live in their midst, enjoying and understanding nature to the fullest. Vacations will become educational experiences as they notice birds and insects inhabiting the areas they visit. By learning to keep a field journal, they will be able to notice unusual circumstances or sudden increases in bird or insect populations. They will become true scientists as they come to know nature and the fascinating world that God created. Grades K-6.
