Difference Between Inheritance and Polymorphism. May 11, 2016 4 Comments. Inheritance allows, code reusability and the polymorphism is, the occurrence of one function with different form. The basic difference between inheritance and polymorphism is that inheritance allows the already existing code to be reused again in a program, and polymorphism provides a mechanism to dynamically decide what form of a function to be invoked.

Difference Between Inheritance and Polymorphism (with ...

Inheritance and polymorphism are addressed in the following sections. As we'll see, inheritance is a mechanism for sharing common features amongst classes while polymorphism is a mechanism for designating unique features for each class. 13.2.1.

Chapter 13. Inheritance and Polymorphism

Inheritance and Polymorphism. Inheritance allows one class (the subclass) to use and modify the public variables and methods of another class (the superclass). Usually, the subclass is a specialized version of the more general superclass, an is-a relationship. For example, a square is a rectangle, which in turn is a polygon.

Inheritance and Polymorphism

Polymorphism vs Inheritance in OOP: Polymorphism is an ability of an object to behave in multiple ways. Inheritance is to create a new class using properties and methods of an existing class. Usage: Polymorphism is used for objects to call which form of methods at compile time and runtime. Inheritance is used for code reusability. Implementation
