(Review from JAMA) Malignant mesothelioma is an uncommon neoplasm usually associated with exposure to asbestos. Because of its low incidence, thorough reviews of the topic are hard to find. Harvey Pass and colleagues have edited an up-to-date, comprehensive book that includes a wide range of information, from a historical perspective to descriptions of the latest treatment.

Malignant Mesothelioma: Pathogenesis, Diagnosis, and

Malignant Mesothelioma: Pathogenesis, Diagnosis, and Translational Therapies eBook: Harvey I. Pass, Nicholas Vogelzang, Michele Carbone: Amazon.co.uk: Kindle Store

Malignant Mesothelioma: Pathogenesis, Diagnosis, and

Malignant mesothelioma (MM) is an aggressive neoplasm that arises primarily from the surface serosal cells of the pleura and peritoneum (1 , 2). It can also develop from the serosal surfaces of the pericardium or the tunica vaginalis. Up to 80% of all cases are pleural in origin and are defined as malignant pleural mesothelioma (MPM).

Molecular pathogenesis of malignant mesothelioma

Malignant Pleural Mesothelioma: Advances in Pathogenesis, Diagnosis, and Treatments Respiratory Disease Series: Diagnostic Tools and Disease Managements: Amazon.co.uk ...

Malignant Pleural Mesothelioma: Advances in Pathogenesis

Malignant Mesothelioma is suitable for a broad audience. Laboratory researchers will use it as a resource for information about the pathogenesis, animal models, molecular genetics, and cell lines of mesothelioma.... Clinicians will benefit from this complete guide to the presentation, prognosis, imaging, and treatment of the disease.

Malignant Mesothelioma | SpringerLink

Malignant mesothelioma is a highly lethal malignancy of the serosal membranes of the pleura, peritoneum, pericardium, or tunica vaginalis testes. This is a rare disease. As an example, of the approximately 3300 cases of mesothelioma diagnosed in the United States every year, only 10 to 15 percent are peritoneal [1-4].

Malignant peritoneal mesothelioma: Epidemiology, risk

Malignant pleural mesothelioma (MPM) is a rare, aggressive tumor for which no effective therapy exists despite the discovery of many possible molecular and genetic targets. Many risk factors for MPM development have been recognized including environmental exposures, genetic susceptibility, viral contamination, and radiation.

Pathogenesis of malignant pleural mesothelioma and the

Malignant pleural mesothelioma is an aggressive malignancy of the pleural surface, predominantly caused by prior asbestos exposure. There is a global epidemic of malignant pleural mesothelioma underway, and incidence rates are predicted to peak in the next few years.

Malignant pleural mesothelioma: an update on investigation

BACKGROUND: Patients with malignant pleural mesothelioma (MPM) have a life-limiting illness and short prognosis and experience many debilitating symptoms from early in the illness. Innovations such as remote symptom monitoring are needed to enable patients to maintain wellbeing and manage symptoms in a proactive and timely manner.

Advanced Symptom Management System for Patients with

The mesothelium consists of a single layer of avascular flat nucleated cells that lines serosal cavities and the majority of internal organs, playing important roles in maintaining normal serosal...

Mesothelioma Pathophysiology — News-Medical.net

Malignant pleural mesothelioma is an aggressive malignancy of the pleural surface, predominantly caused by prior asbestos exposure. There is a global epidemic of malignant pleural mesothelioma underway, and incidence rates are predicted to peak in the next few years.This article summarises the epidemiology and pathogenesis of malignant pleural mesothelioma, before describing some key factors in the patient experience and outlining common symptoms.

Malignant pleural mesothelioma: an update on investigation

Malignant pleural mesothelioma (MPM) results from neoplastic transformation of mesothelial cells. Past asbestos exposure represents the major risk factor for MPM, as the link between asbestos fibres and MPM has been largely proved by epidemiological and experimental studies.

Malignant Mesothelioma: Pathogenesis, Diagnosis, and

Malignant mesothelioma is a rare, highly aggressive cancer arising from mesothelial cells that line the pleural cavities. Approximately 80% of mesothelioma cases can be directly attributed to asbestos exposure. Additional suspected causes or co-carcinogens include other mineral fibres, simian virus 40 (SV40) and radiation.

Molecular pathogenesis of malignant mesothelioma | Expert

Mesothelioma is cancer of the mesothelium, a membrane that lines the inside of the body's cavities, such as the abdomen or chest. Three out of every four cases of mesothelioma disease begin in the...

Mesothelioma: Symptoms, Causes, Diagnosis, Treatment

Commonly used immunohistochemical stains for the diagnosis of malignant pleural mesothelioma a Lower percentages are described in sarcomatoid subtype; higher percentages in epithelioid subtype b GATA3, strong, diffuse expression in sarcomatoid neoplasm argues for sarcomatoid malignant mesothelioma
