Powerful Ideas. My book, Powerful Ideas of Science and How to Teach them, attempts to answer this question by exploring thirteen scientific ideas that have the power to transform how young people see themselves and the world around them. Each chapter tells the story of one scientific idea and how to teach it alongside examples and non-examples from biology, chemistry and physics to show what great science teaching might look like and why.

Working with Big Ideas of Science Education. The purpose of this publication is to update the discussion and conclusions about the essential understanding in science that all students should acquire during the compulsory years of school. It follows five years after Principles and Big Ideas of Science Education was written in response to concerns that many students did not find their science education interesting or see it as relevant to their lives.

Follow context panels in The Science Book to trace how one scientist's ideas informed the next. See, for example, how Alan Turing's "universal computing machine" in the 1940s led to smart phones, or how Carl Linnaeus's classifications led to Darwin's theory of evolution, the sequencing of the human genome and lifesaving gene therapies.
