Abstract: The Science of Psychology uses the most up-to-date thought and research to fully address the scientific focus of the AP Psychology

Curriculum and provides students with the guidance and support they need to master the key topics and learning objectives and succeed on the AP Psychology exam.

Why Things Go Right. The Science of Psychology: An Appreciative View by Laura King (University of Missouri at Columbia) is the first text to bring a truly appreciative view of psychology-as a science and for exploring behavior-to introductory students. It is

Bookmark File PDF The Science Psychology

built around the idea that students must study the discipline of psychology as a whole, that the sub-disciplines are intricately connected, and that human behavior is best understood by exploring its functioning state in addition to its potential dysfunctions. For example, imagine that you have been asked to create a science of "watchology." You have two watches that both have had the unfortunate "trauma" of being left in the pocket of someone's jeans through the washer and dryer. One watch has suffered the worst possible fate-it no longer tells time. The other has emerged from the traumatic event still ticking. Which watch would you use to develop your new science of watchology? Clearly, the working watch will help you understand watches better than the broken one.

Bookmark File PDF The Science Psychology

What does watchology have to do with psychology? Quite simply, in psychology as in watchology, it makes sense to start with what works: to gain a general understanding of human behavior and then apply that knowledge to those who have emerged from life's experiences in dysfunction.

The second edition of 'The Science of Psychology' brings a truly appreciative view of psychology - as a science and for exploring behavior - to introductory students.

Do you want your students to just take psychology or to experience psychology? Experience Psychology is a complete learning system that empowers students to personally, critically, and actively experience the impact of psychology in everyday life. Experience Psychology is about, well, experience—our own behaviors; our relationships at home and in our communities, in school and at work; and our interactions in different learning environments. Grounded in meaningful real-world contexts, Experience Psychology's contemporary examples, personalized author notes, and applied exercises speak directly to students, allowing them to engage with psychology and to learn verbally, visually, and experientially—by reading, seeing, and doing. Through Do It!, a series of brief, reoccurring sidebar activities linked to the text reading, students get an opportunity to test their assumptions and learn through hands-on exploration and discovery. Reinforcing that the science of psychology requires active participation, Do It! selections include, for example, an exercise on conducting an informal survey to observe and classify behaviors in a public setting, as well as an activity guiding students on how to research a “happiness gene.” Such exercises provide students with a vibrant and involving experience that gets them thinking as psychologists do.
