With fire safety a top priority for building designers around the world, The Chartered Institution of Building Services Engineers (CIBSE) has published a revised and updated version of its widely respected Guide E: Fire Safety Engineering. The revised Guide takes account of recent changes in regulation 7 of the Building Regulations in England, which prohibit the use of combustible materials in the external walls of buildings over 18m in height containing residential accommodation.

CIBSE - Building Services News and Policy

The latest version of CIBSE Guide E Fire Safety Engineering highlights the importance of smoke control in high-rise buildings. MKA Fire MD and Guide E chair Martin Kealy reports. The tragic fire at Grenfell Tower, in West London, has turned the spotlight on the importance of fire engineering in buildings. As with all major blazes, there are many contributory factors that transform a nuisance fire into a serious one that leads to large loss of life.

It mirrors BS 9991 in recommending mechanical shaft ventilation or pressurisation of fire-fighting cores in buildings with a floor higher than 30m, and adds guidance on mechanical shaft systems.

legislation and guidance on smoke control - CIBSE Journal

In NFPA 92B [2,3] and CIBSE Guide E, the effect of sprinklers on the design fire size is accounted for by assuming that the fire stops growing when sprinklers are actuated. It is assumed that the fire continues to burn at this size until the involved fuel is consumed, with no further effect of the sprinkler spray on the burning process.
