Fsi Engine

Turbo fuel stratified injection (TFSI) is a trademark of the Volkswagen Group for a type of forced-aspiration ("turbo") engine where the fuel is pressure-injected straight into the combustion chamber in such a way as to create a stratified charge.

FSI engines achieve higher performance and better dynamics than conventional engines, with better efficiency. Whether they have four, five, six, eight, ten or twelve cylinders, all gasoline engines from Audi today employ the FSI principle.

TSI engine Not to be confused with the Euro-market 1.4 TSI 'twincharged' engine, the 2.0 TSI is an evolution of the 2.0 Turbo FSI. First appearing in late-production 2008.5 VW and Audi models, the TSI engine addresses the issues of its FSI predecessor. At a glance, the changes are subtle.

FSI or TSI? The differences explained.

In Europe FSI engines use the lean burn for optimized power and economy, but the U.S. version uses the same air-to-fuel ratio as port-injected engines. So, from this description we know that we are talking about a type of injection system, not an engine block.

The VW 3.6 FSI engine is a VR6 (narrow V family EA390) gasoline 3.6-liter engine. It was first introduced to Audi Q7 in 2005 (BHK and BHL engines) and later to other VW vehicles: Passat R36 and CC (BLV, BWS), Phaeton (CHNA and CMVA), Touareg (CGRA and etc.). The 3.6-liter version was built from the 3.2 V6 FSI engine installed in Audi models.

A. What is the TSI engine? TSI stands for "turbocharged straight injection" and was inspired by the technology of Volkswagen's TDI Clean Diesel and FSI direct fuel injection engines. The engine allows for higher torque at lower RPMs, which means more power with less fuel usage.

What is the Audi TFSI engine? | AnswersDrive

The VW and Audi 2.0T FSI engine is found in so many models (listed below). If youre not sure if your vehicle has the FSI or TSI engine take a look at the picture above. If your engine does not look like this one you likely have a TSI engine, and you can find TSI common problems HERE.

In TFSI engines, the high-pressure pump is driven by the camshaft. In EA113 engines, the camshaft has a cam in this place. The connection between the high pressure pump and the camshaft is made via a pump tappet.

The Differences between TFSI & TSI Engines

Gasoline direct injection (GDI), also known as petrol direct injection (PDI), is a mixture formation system for internal combustion engines that run on gasoline (petrol), where fuel is injected into the combustion chamber.This is distinct from manifold fuel injection systems, which inject fuel into the intake manifold.. The use of GDI can help increase engine efficiency and specific power ...

Gasoline direct injection - Wikipedia

Fuel Stratified Injection or FSI is a proprietary direct fuel injection system developed and used by Volkswagen AG, as well as its luxury subsidiary Audi. It was first introduced in 2000 when VW introduced the 1.4 litre direct-injected inline-four unit in the Volkswagen Lupo city car.

Fuel Stratified Injection - Wikicars

Just looking at the engine cover is not always a sure fire way to identify one from the other. What does FSI and TSI stand for? FSI is short for "fuel stratified injection" or "fuel straight injection" and TSI is short for "turbo stratified injection".
