Insulating supports called insulators are required at the points where they are supported by utility poles or transmission towers. Insulators are also required where the wire enters ...

Insulator (electricity) - Wikipedia

Insulation can fail in a variety of ways, if voltage gets too high and exceeds the "breakdown voltage" electrons will get excited to the point where they break out of their stable orbit, current will then pass through the material and often destroy the insulator. 3.) Insulation in electric wires.

A high-voltage cable (HV cable) is a cable used for electric power transmission at high voltage. A cable includes a conductor and insulation. Cables are considered to be fully insulated. This means that they have a full rated insulation system which will consist of insulation, semi-con layers, and a metallic shield.
