The literal meaning of computer is a device that can calculate. However, modern computers can do a lot more than calculate. Computer is an electronic device that receives input, stores or processes the input as per user instructions and provides output in desired format.

Basics of Computers - Introduction - Tutorialspoint

Computers store all data and instructions as 0's and 1's. For this reason the numbers and characters we use to write instructions and data must be translated or encoded as 0's and 1's before they can be used in a computer. This encoding is usually called the internal representation of the character or number.
