Lunar eclipses occur when Earth's shadow blocks the sun's light, which otherwise reflects off the moon. There are three types — total, partial and penumbral — with the most dramatic being a total...

Lunar eclipses: What are they & when is the next one? | Space

What is a Lunar Eclipse? During a lunar eclipse, Earth comes between the Sun and the Moon, blocking the sunlight falling on the Moon. There are two kinds of lunar eclipses: A total lunar eclipse occurs when the Moon and Sun are on opposite sides of Earth. A partial lunar eclipse happens when only part of Earth's shadow covers the Moon. During some stages of a lunar eclipse, the Moon can appear reddish.

Total Lunar Eclipse - Blood Moon - Time and Date

A lunar eclipse occurs when the Moon moves into the Earth's shadow. This can occur only when the Sun, Earth, and Moon are exactly or very closely aligned (in syzygy) with Earth between the other two, and only on the night of a full moon. The type and length of a lunar eclipse depend on the Moon's proximity to either node of its orbit.. A totally eclipsed Moon is sometimes called a blood moon ...

Lunar eclipse - Wikipedia

You may be wondering what the difference between a Solar and Lunar eclipse is. A Lunar eclipse occurs when the Earth passes directly between the Sun and the Moon - the resulting shadow is the Lunar Eclipse. Lunar eclipses take place during the New Moon, while Solar eclipses occur on the Full Moon.
