Management Of Insect Pests Of

Pest control is the regulation or management of a species defined as a pest, a member of the animal kingdom that impacts adversely on human activities. The human response depends on the importance of the damage done, and will range from tolerance, through deterrence and management, to attempts to completely eradicate the pest. Pest control measures may be performed as part of an integrated pest management strategy. In agriculture, pests are kept at bay by cultural, chemical and biological means.

Pest control - Wikipedia

Pest Management Diseases, insects, and weeds can cause costly and irreparable harm to livestock and crops. Methods to manage these problems include the use of pesticides or biological pest control. Integrated pest management (IPM) couples both methods and includes monitoring to reduce the overuse of pesticide applications.
