Possible Solutions Ozone Depletion

These solutions to ozone depletion can help to reinforce this shield so that it stays in place for future generations. 1. Limit fossil fuel powered transportation. Transportation networks account for up to 70% of the greenhouse gas emissions that nations like the United States produce.

In 1969 Dutch chemist Paul Crutzen published a paper that described the major nitrogen oxide catalytic cycle affecting ozone levels. Crutzen demonstrated that nitrogen oxides can react with free oxygen atoms, thus slowing the creation of ozone (O_3), and can also decompose ozone into nitrogen dioxide (NO_2) and oxygen gas (O_2).

Conclusions: Looking back over the scientific investigation of ozone depletion, we can see how the Molina-Rowland hypothesis evolved with new data. When chlorine nitrate, a chemical that ties up chlorine in an ozone-safe form, was added to the hypothesis, the expected amount of ozone loss decreased.

In the simplest example of such a cycle, a chlorine atom reacts with an ozone molecule (O_3), taking an oxygen atom to form chlorine monoxide (ClO) and leaving an oxygen molecule (O_2). The ClO can react with a second molecule of ozone, releasing the chlorine atom and yielding two molecules of oxygen.

With ozone depletion, more UV radiation reaches the ground, leading to health and environmental problems. As Lamont Poole, a senior research scientist with Science Systems and Applications Inc. at NASA Langley, explained at a December Science Café at Marker 20 in Hampton, the best-known example of ozone depletion is the springtime Antarctic ...

The ozone layer protects the Earth against most UVB coming from the sun. It is always important to protect oneself against UVB, even in the absence of ozone depletion, by wearing hats, sunglasses, and sunscreen. However, these precautions will become more important as ozone depletion worsens.

The issue Stratospheric ozone depletion has been a major environmental issue of the last two decades--first as an interesting hypothesis following publication of the seminal paper by Molina and Rowland (1974), and then as a matter of urgency and intergovernmental action following the discovery of the ozone 'hole' in the Antarctic stratosphere in 1984 (Farman et al., 1985).

Ozone depletion - CIESIN

One example of ozone depletion is the annual ozone "hole" over Antarctica that has occurred during the Antarctic spring since the early 1980s. This is not really a hole through the ozone layer, but rather a large area of the stratosphere with extremely low amounts of ozone.

Scientists have reached consensus that ozone depletion in the stratosphere is caused by ozone depleting chemicals. These chemicals contain chlorine or bromine atom with inherent chemical stability and have long lifetime in the atmosphere, in the range of 40 to 150 years. These chemicals and other trace gases drift up into the stratosphere and ...
