Result: The following crashing scheme is suggested for the given project: Reduce the time of C by 2 weeks and that of E by one week. Project time after crashing is 67 weeks. Extra amount required = $2 \times 500 + 1,000 = \text{Rs. } 2,000$.

Problem of Crashing Of A Project - study Material ...

Project crashing is a method for shortening the project duration by reducing the time of one (or more) of the critical project activities to less than its normal activity time. This reduction in the normal activity time is referred to as crashing.

An Example to Project Management Crashing

Project crashing is the name given to schedule compression techniques that are used to shorten the duration of a project without changing the scope. Two techniques, fast tracking and crashing, with cost and schedule trade-offs, are analyzed to determine how to obtain the best result.

ProjectManagement.com - Project Crashing Using Critical

...

Crashing • Project crashing is the method for shortening the project duration by reducing the time of one or more critical activities to less than their normal time. • Crashing is achieved by devoting more resources. Thus the cost associated with the project is increased.

project crashing - SlideShare

Final step in crashing the project to 110 days would be accomplished by reducing the duration of activity A by 5 days to 110 days, reducing activity C by 5 days to 35 days, and reducing activity F by 5 days to 55 days. The combined cost slope for the simultaneous reduction of activity A, activity C, and activity F would be \$1000 per day.
