Reinforcement Genetics

Answers

Reinforcement. KEY CONCEPT A combination of methods is used to study human genetics. The patterns of inheritance in humans are the same as the patterns of inheritance in other sexually reproducing organisms. Phenotypes are often the result of varying degrees of dominance, several genes, multiple alleles, or sex-

Biology

Reinforcement is a process of speciation where natural selection increases the reproductive isolation between two populations of species. This occurs as a result of selection acting against the production of hybrid individuals of low fitness. The idea was originally developed by Alfred Russel Wallace and
