Anterior—the end of the clavicle is pushed forward, in front of the sternum (breastbone) Posterior—the end of the clavicle is pushed backward, behind the sternum and deep into the upper chest; Although both kinds of dislocations are serious injuries, a posterior dislocation requires more urgent medical attention.

Sternoclavicular (SC) Joint Disorders - OrthoInfo - AAOS

Sternoclavicular Dislocations The sternoclavicular joint can dislocate from its normal position. The clavicle will either dislocate in front (an anterior SC dislocation) or behind (a posterior SC dislocation) the sternum. The posterior SC dislocations are more worrisome because of the important structures that are located just behind the sternum.

Sternoclavicular (SC) Joint Dislocations

A sternoclavicular dislocation is a relatively uncommon form of shoulder injury because the sternoclavicular joint, between the sternum and clavicle, is reinforced by a number of strong bands of tissue called ligaments, as well as a capsule surrounding the joint. Motor vehicle accidents, sporting injuries and falls may all give rise to sternoclavicular dislocation.

What Is Sternoclavicular Dislocation? (with pictures)

Bone dislocation. If you dislocate your sternum, it usually become separated from the clavicle. However, ribs can separate from the sternum as well.

Sternum Popping: Treatment, Pain, Chest Pain, and Symptoms

(PDF) Sterno-manubrial Dislocation in a 9-year old Gymnast

To the Editor: —The following unusual injury should be recorded: A Negro, about 30 years of age, was struck by a truck while he was bent forward. The truck forced him backward against a pillar before it was stopped, compressing the lower part of the chest and the abdomen. He complained that he felt a loud snap in his chest and subsequently had severe pain over the sternum at the level of the ...

DISLOCATION OF STERNUM | JAMA | JAMA Network

Sternomanubrial dislocation is a rare injury, typically resulting from a high-energy trauma. However, among patients with preexisting sternomanubrial arthropathy (most commonly, rheumatoid arthritis), dislocation can be caused by a minor trauma. The sternomanubrial joint may be synovial, synchondral, or synosteal.
